EXECUTIVE SUMMARY

- Experienced Software Engineer with 5.4 years of expertise in web development, specializing in e-commerce, multi-level marketing (MLM), content management systems (CMS), and learning management systems (LMS) focusing on delivering impactful solutions.
- Expert in Python, Django, Golang, Docker, and PostgreSQL for 4+ years, delivering scalable and efficient solutions in challenging roles.
- Able to quickly adapt to new technologies, bringing fresh perspectives to team collaboration and driving innovation to support organizational goals.
- Contributed to the successful completion of 10+ projects in MLM, e-commerce, and LMS, efficiently ensuring timely delivery and effective resource utilization.

PROFESSIONAL EXPERIENCE

Epixel Solutions Pvt Ltd, Palakkad

July 2019 – Present

Senior Software Engineer

- Deployed Cash on Delivery (COD) payment system with an admin feature for approving or rejecting COD orders, which increasing by 10% of total sales.
- Enhanced a 'Buy Together' product selection feature on the shop page using Node.js, enhancing cross-sell opportunities and increasing sales by 12%.
- Directed teams of 2-3 employees across two projects, demonstrating effective leadership.
- Authored clean, maintainable code, performed unit testing, and conducted code reviews, leading to decrease in bugs and improved overall productivity.
- Launched a points rewards system with expiration dates, offering one-time, weekly, and action-based rewards for activities like app downloads, logins, email verification, quiz scoring, product reviews, and daily check-ins.
- Coordinated with cross-functional teams to optimize bonus calculations through query optimization and code reuse, enhancing overall system efficiency.
- Developed functionality enabling the admin to change the sponsor for users in the holding tank.
- Migrated over 5,000 rows of CSV data to update user metrics, including sales, BV, and points, from an external platform, improving data accuracy and reporting efficiency.
- Crafted a speed timeline chart using Node.js to track personal sales progress, enhancing real-time data visualization and increasing customer satisfaction.
- Established an active status criterion for distributors, requiring a personal annual purchase of at least 100k to remain active, with status updates automated via Celery tasks.
- Dockerized 5+ applications, reducing manual deployment errors and improving development cycle time.
- Built subaccount functionality, enabling over 50 users to manage multiple accounts and positions within the genealogy tree using the same username and email, with seamless account switching options.
- Incorporated 3+ third-party APIs, Mailchimp for email campaigns, JCC payment gateway, and PayQuicker for payouts, enhancing application functionality and user engagement.
- Created Shipping methods 'ship from company' and 'ship from store' with filter and search stores.

- Managed compensation plans such as binary bonuses, level bonuses, sponsor bonuses, and rank rewards, enhanced team performance and engagement.
- Implemented task queue systems like Celery to efficiently manage asynchronous tasks, such as email notifications, user activation, background processes, and CSV exports.
- Enhanced application performance by optimizing queries, implementing indexing, and caching.
- Implemented the member ranking system based on direct referrals, boosting user engagement by 10% through increased activity from new connections.
